

FOOD & TOY SAFE DANISH OIL

Product Description

Our very popular Danish Oil is food safe and complies to EN71 toy safe when dry, giving this product a huge number of potential uses.

Thinner, more penetrating and less smelly than other Danish Oils, our product contains only pure Tung Oil and a dearomatised solvent, no artificial varnish, resins or other vegetable oils.

Our Danish Oil is very easy to apply, contains over 50% Tung Oil, is odourless when dry, deeply penetrating and protecting, will not chip, flake or peel when cured and is naturally water resistant.

As a high-build finish, this oil can produce a super warm glow gloss when enough coats are applied and buffed when cured thoroughly. Supplied in a 500ml (17.6oz) cone top bottle.

Basic Application

- 1: Shake before use.
- 2: Sand your work down to your desired grit.
- 3: Apply the oil using a paper towel or rag;
- 4: Remove excess oil from surface;
- 5: Allow 20 minutes between coats and apply a maximum of 2 before allowing to cure;
- 6: Leave to cure thoroughly for at least 24-48 hours before buffing and putting into use. Curing time will vary due to ambient temperature and humidity;
- 7: Recoat as required.

PRO FINISHING TIPS

- Avoid rushing your finishing, particularly with oils.
 - Clean the dust off the piece before applying, particularly open grained woods.
 - Apply with paper towel.
 - Apply with the lathe stationary.
- For the best finish, build the product up in multiple coats over several days, allowing 24 hours curing time between no more than 4 - 6 coats.
- Lightly de-nib the surface between cured coats before applying more oil.
- With many coats applied, a warm gloss shine can be achieved by carefully buffing the cured surface.
 - Can be used with the Intrinsic Colour Collection.
- If using as an embellishment rather than a finish, apply the oil *before* any sealer.
 - Ensure the product is completely cured before applying any further finishes or putting into use.
 - Firmly replace the lid after use.
- Store in a cool dry place out of direct light, away from heat sources and protect from freezing. Once opened, use within 6 months.
- Lay saturated towels or cloths flat to cure before appropriate disposal. Do Not Pile Them Up.

SAFETY FIRST! Always take appropriate steps to ensure the safety of your workshop environment.
